## Index

Α	Degree Centrality with, 83
A* algorithm	importing social graph data into, 80
Shortest Path, 56-58	importing software dependency graph data
with Neo4j, 57	into, 114
actual density, 24	importing transport dataset into, 43
acyclic graphs, 18	installing, 34
cyclic graphs vs., 22-23	Label Propagation with, 130
trees and, 23	online resources, 228
aggregateMessages, 54, 67, 86	PageRank with, 103-105
airline flight data	personalized PageRank with, 107
analyzing with Apache Spark, 166-181	Shortest Path algorithm (weighted), 54-56
delays from ORD, 170-172	Single Source Shortest Path algorithm with,
exploratory analysis, 168	67-69
fog-related delays from SFO, 172-174	Spark Graph project, 33
interconnected airports by airline, 174-181	Strongly Connected Components with, 120
popular airports, 168-170	Triangle Count with, 117
Alexa, 185	when to use, 31
algorithm-centric processing, 30	Approximate Betweenness Centrality, 160
All Pairs Shortest Path (APSP) algorithm, 40,	artificial intelligence (AI), 183
60-65	average degree, 81
sequence of operations, 60-62	average shortest path, 27
when to use, 62	Awesome Procedures on Cypher (APOC)
with Apache Spark, 62	library, 35, 148, 192, 228
with Neo4j, 63-65	
Amazon, 185	В
anti-money laundering (AML) analysis, xiv	Bacon number, 50
Apache Spark	Barabási, Albert-László, 11
about, 32-34	Betweenness Centrality algorithm, 78, 92-99
All Pairs Shortest Path algorithm with, 62	bridges and control points, 93
analyzing airline flight data with, 166-181	calculating, 93
(see also airline flight data)	when to use, 94
Breadth First Search with, 46	with Neo4j, 95-97
Closeness Centrality with, 86-88	with Yelp dataset, 159-162
Connected Components with, 125-126	binary classification, 200

bipartite graphs, 18, 25	Configuration that Outperforms a Single
Boruvka, Otakar, 70	Thread (COST), 29
Breadth First Search (BFS), 45-47	Connected Components algorithm, 109,
bridges, 93	124-127
Bridges of Königsberg problem, 2, 49	when to use, 124
bulk data import, Neo4j Import tool for,	with Apache Spark, 125-126
225-227	with Neo4j, 126
Bulk Synchronous Parallel (BSP), 30	connected graphs, 19
	context, xiv, 183
C	costs, 50, 57
cancer research, xiv	cycles, 22
Centrality algorithms, 27, 77-108	cyclic graphs, 18
Betweenness Centrality, 92-99	Cypher, 33, 166, 225
Closeness Centrality, 84-92	Cypher for Apache Spark (CAPS), 33
Degree Centrality, 81-84	
overview, 78	D
Randomized-Approximate Brandes, 98	D'Orazio, Francesco, 10
social graph data for, 79-81	damping/dampening factor, 102, 104
Chicago O'Hare International Airport (ORD),	DataFrame, 32
data in delays from, 170-172	datasets, sources for, 228
citation networks, 124	deduplication, 124
Clauset, A., 5	Degree Centrality algorithm, 78, 81-84
clique, 23	reach of a node, 81
Closeness Centrality algorithm, 78, 84-92	when to use, 82
Harmonic Centrality variation, 91	with airport data, 168-170
Wasserman Faust variation, 89-91	with Apache Spark, 83
when to use, 85	degree distribution, 81
with Apache Spark, 86-88	degree of a node, 81
with Neo4j, 88	delta-stepping algorithm, 69
Clustering Coefficient algorithm, 109	dense graphs, 18, 23
(see also Triangle Count and Clustering	density of relationships, 111
Coefficient algorithms)	Depth First Search (DFS), 48-49, 120
clusters, defined, 19	diameter of a graph, 27
Colorado Index of Complex Networks (ICON),	Dijkstra, Edsger, 50
228	Dijkstra's algorithm (see Shortest Path algo-
community detection algorithms, 27, 109-143	rithm)
Connected Components, 124-127	directed acyclic graph (DAG), 22
for link prediction, 218-223	directed graphs, 18, 21
Label Propagation algorithm, 127-133	directional relationships, xiii
Louvain Modularity, 133-143	disconnected graphs, 19
software dependency graph data for,	distance (term), 50
112-114	
Strongly Connected Components, 119-124	E
Triangle Count and Clustering Coefficient,	<del>-</del>
114-119	Eguíluz, Víctor M., 4
validating communities, 143	entity relationship diagram (ERD), xiii
complete graph, 23	Erdös, Paul, 51
components, defined, 19	Euler, Leonhard, 2
1 ,	Eulerian path, 49

F	representative platforms, 31-37
Facebook, 184	selecting a platform, 31
Faust, Katherine, 89	graph processing, 6-8, 30
feature extraction, 186	Graph search algorithms, 39-49
feature importance, 210	defined, 39
feature selection, 186	Graph Search algorithms, 40
feature vectors, 186	Breadth First Search, 45-47
features	Depth First Search, 48-49
connected feature extraction/selection,	transport graph data for, 41-44
185-189	graph theory, 15-28
graph algorithm features, 188	about, 15-28
graphy, 187	origins of, 2
Fischer, Michael J., 124	terminology, 15
Fleurquin, Pablo, 4	types and structures, 16
foodweb, 5	graph traversal algorithms
Freeman, Linton C., 81, 93	Breadth First Search, 45-47
1100111111, 21111011 01, 01, 50	Depth First Search, 48-49
c	graph-centric processing, 30
<b>G</b>	GraphFrames, 32, 103, 114
Galler, Bernard A., 124	graphs (generally)
Girvan–Newman (GN) benchmark, 143	about, 2
global clustering coefficient, 116	acyclic vs. cyclic, 18, 22-23
global patterns, 6	bipartite, 18, 25
Google	common attributes, 18
PageRank, 99	connected vs. disconnected, 19
Pregel, 30	flavors of, 18-25
Grandjean, Martin, 4	k-partite, 18, 25
graph algorithms (generally)	monopartite, 18, 24
about, 3-5	sparse vs. dense, 23
centrality, 27	undirected vs. directed, 18, 21
community detection, 27	unweighted vs. weighted, 18, 19
defined, 3	graphy datasets, 228
(see also specific algorithms)	graphy features, 187
importance of, 8-12	
in practice, 145-181	Н
pathfinding, 27	Hamiltonian path, 49
types of, 27	Harmonic Centrality closeness algorithm, 91
graph analytics	Hart, Peter, 57
about, 3-5	hop (term), 21, 50
defined, 3	hybrid transactional and analytical processing
use cases, 12	(HTAP), 7
graph compute engines, 31	(111111), /
graph databases, 31	1
graph embedding, defined, 186	
graph global, 6, 186	impurity, 211
